Transnational Climate Litigation: The Contribution of the Global South

Jacqueline Peel and Jolene Lin

679

Since the conclusion of the Paris Agreement, climate litigation has become a global phenomenon, casting courts as important players in multilevel climate governance. However, most climate litigation scholarship focuses on court actions in the Global North. This Article is the first to shine a light on the Global South's contribution to transnational climate litigation. Analysis of this experience is essential if transnational climate jurisprudence is to contribute meaningfully to global climate governance, and to ensuring just outcomes for the most climate-vulnerable.

Crimes Against the Sovereign Order: Rethinking International Criminal Justice

Ryan Liss

727

The scope of international criminal jurisdiction poses a fundamental challenge for criminal law theory. Prevailing justifications for the state's authority to punish crime assume the existence of connections between the state and either the criminal or the crime that are not always present in the international criminal context. Recognizing this gap, this Article introduces a new theory of what distinguishes international crimes from domestic crimes and justifies the unusual scope of international criminal jurisdiction. As this Article explains, international crimes are unique in the way they undermine international society's structure as a system of sovereign states.
